

DQINAV RELEASE NOTES

August 19, 2020

DQINAV v7.1.16

New version available in downloads - DQIP21API vr1.0.4 (20201020)

Changes:

Fixed the date format that is used in the API queries. The format was not using 24 hour date format which the API needs.

Fixed issue where if the query does not return results, it throws an error. The results is now checked before adding the list of records

DQINAV v7.1.15

New version available in downloads – DQINav vr7.1.15 (20200110)

Changes:

1. Orders no longer split by location and shipment date
2. The order location and shipment date now come from the order header instead of the lines
3. Detail lines are associated to the shipped/unshipped order only
4. Orders should still be split by partial shipments as long as those are distinct shipment records in Sales Shipment Header

DQINAV v7.1.14

New version available in downloads – DQINav vr7.1.14 (20191216)

Changes:

1. Employee location – when the employee record is updated or inserted, the locationId is now set
 - a. For salespersons, the employee name comes from the Salesperson_Purchaser table in NAV which does have a location field, so an attempt will be made to get the location from this field for the employee.
 - b. If the location is not found or if the employee is not a salesperson (AD user), then the **order** location will be used to set the employee location.

DQINAV v7.1.12

New version available in downloads - DQINav vr7.1.12 (20191118)

Changes:

1. Changed the user id fields being referenced in the queries to the Nav Sales Shipment Header and Return Receipt Header tables.
 - a. Changed from [User ID] to [Sales Order User ID]

DQINAV v7.1.11

New version available in downloads – DQINav vr7.1.11 (20191113)

Changes:

1. Return orders can now be imported
 - a. To turn on importing Returns, check the Returns box under the Tables tab
 - b. Set Return import filters under Import tab
 - c. Set Return options in Options form, under Import tab
2. Return Default Status – found under Group Options form -> Status tab
