

# DQIWEBAPI RELEASE NOTES

Subject: DQIWebAPI Release Notes

Date: 12/01/2021

Version: 1.7

## DQIWebAPI v1.0.46

New version available in downloads - DQIWebAPI v1.0.46 (20211201)

1. Order \$ Amount to come from dqt.DeliveryValue
2. Time Windows to come from dqt.DeliveryWindow (this can come with the job record information and/or the order. If from the job info, set the job time window. If from order info, set the order time window)
3. A list of any Return Orders for a trip to be written back to WMS to **EXT\_UDF\_STR7**
  - a. Set the Return Order Type under the Import tab
4. Use the RequiredShipDateTime for ReqDate/TripDate instead of PlannedDeliveryDateTime

## DQIWebAPI v1.0.44

New version available in downloads - DQIWebAPI v1.0.44 (20210928)

1. Writeback for K8 API – Confirm Delivery
  - a. API Connection settings found under main 'Writeback' tab
  - b. Confirm Delivery option found under group options 'Writeback' tab
2. Writeback API must now be enabled in order to be called – found under main 'Writeback' tab
3. Transfer type orders can now be imported.
  - a. If the OrderType is set as Transfer, then it will imported as a Transfer

## DQIWebAPI v1.0.40

New version available in downloads - DQIWebAPI v1.0.40 (20210827)

1. Writeback
  - a. Removed sending externalid
  - b. Send externalorderid again

## DQIWebAPI v1.0.37

New version available in downloads - DQIWebAPI v1.0.37 (20210804)

1. Job account import – set job mapzone from District field
  - a. When order is imported, if the order mapzone has not already been set by other means, then the order mapzone will be set to the job account mapzone.
2. Bug fix: The jobnumber on the order XML feed was not being parsed correctly.

## DQIWebAPI v1.0.36

New version available in downloads - DQIWebAPI v1.0.36 (20210804)

1. Writeback – externalorderid field is no longer set

## DQIWebAPI v1.0.34

New version available in downloads - DQIWebAPI v1.0.34 (20210712)

1. OrderType setup tab added under group options
  - a. Status can either be set under Load Type tab or Order Type tab
    - i. Will check load type status first, then order type status
2. CSV file can now be imported – New File Format option should be set – CSVOrdOrdDet
  - a. File should be named orders\*.csv
3. PRSG – job account parsing has changed – the cust and job number is now extracted from the PartyId field.

## DQIWebAPI v1.0.23

New version available in downloads - DQIWebAPI v1.0.23 (20210330)

1. Added ImportCustomer and ImportJob end points to web service.
  - a. Customer and Job accounts can now be inserted/updated directly.

## DQIWebAPI v1.0.15

New version available in downloads - DQIWebAPI v1.0.15 (20201009)

1. For writeback – before every WMS load writeback call, send a Cancel load call first.
  - a. This is a workaround for the issue with sending updates to WMS. Inserts work, but updates do not, so what we do is every time we send a writeback, we first cancel any existing load, so that in effect will make every loadhdr call, an Insert.
  - b. If updating loads in WMS is fixed at some point in the future, then this step can be removed.
